What's New in iPhoto What is iPhoto?

Machine Learning

- Grew out of work in AI
- New capability for computers

Examples:

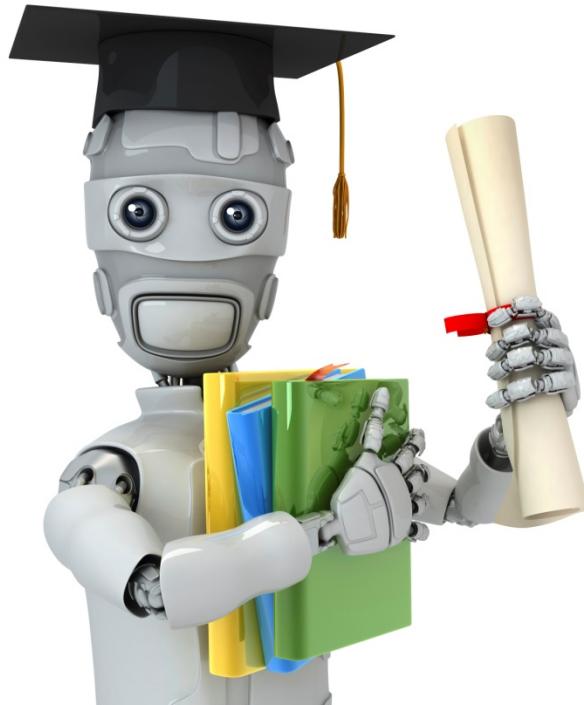

- Database mining
 - Large datasets from growth of automation/web.
E.g., Web click data, medical records, biology, engineering
- Applications can't program by hand.
 - E.g., Autonomous helicopter, handwriting recognition, most of Natural Language Processing (NLP), Computer Vision.

Machine Learning

- Grew out of work in AI
- New capability for computers

Examples:

- Database mining
 - Large datasets from growth of automation/web.
E.g., Web click data, medical records, biology, engineering
- Applications can't program by hand.
 - E.g., Autonomous helicopter, handwriting recognition, most of Natural Language Processing (NLP), Computer Vision.
- Self-customizing programs
 - E.g., Amazon, Netflix product recommendations
- Understanding human learning (brain, real AI).

Machine Learning

Introduction

What is machine learning

Machine Learning definition

- Arthur Samuel (1959). Machine Learning: Field of study that gives computers the ability to learn without being explicitly programmed.
- Tom Mitchell (1998) Well-posed Learning Problem: A computer program is said to *learn* from experience E with respect to some task T and some performance measure P, if its performance on T, as measured by P, improves with experience E.

“A computer program is said to *learn from experience E* with respect to some task T and some performance measure P, if its performance on T, as measured by P, improves with experience E.”

Suppose your email program watches which emails you do or do not mark as spam, and based on that learns how to better filter spam. What is the task T in this setting?

- Classifying emails as spam or not spam. T ←
- Watching you label emails as spam or not spam. E ←
- The number (or fraction) of emails correctly classified as spam/not spam. P ←
- None of the above—this is not a machine learning problem.

Machine learning algorithms:

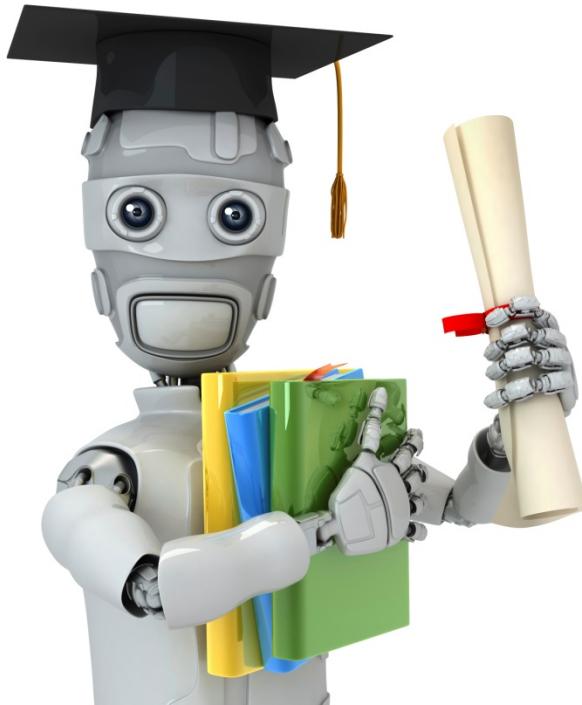

- Supervised learning
- Unsupervised learning

Others: Reinforcement learning, recommender systems.

Also talk about: Practical advice for applying learning algorithms.

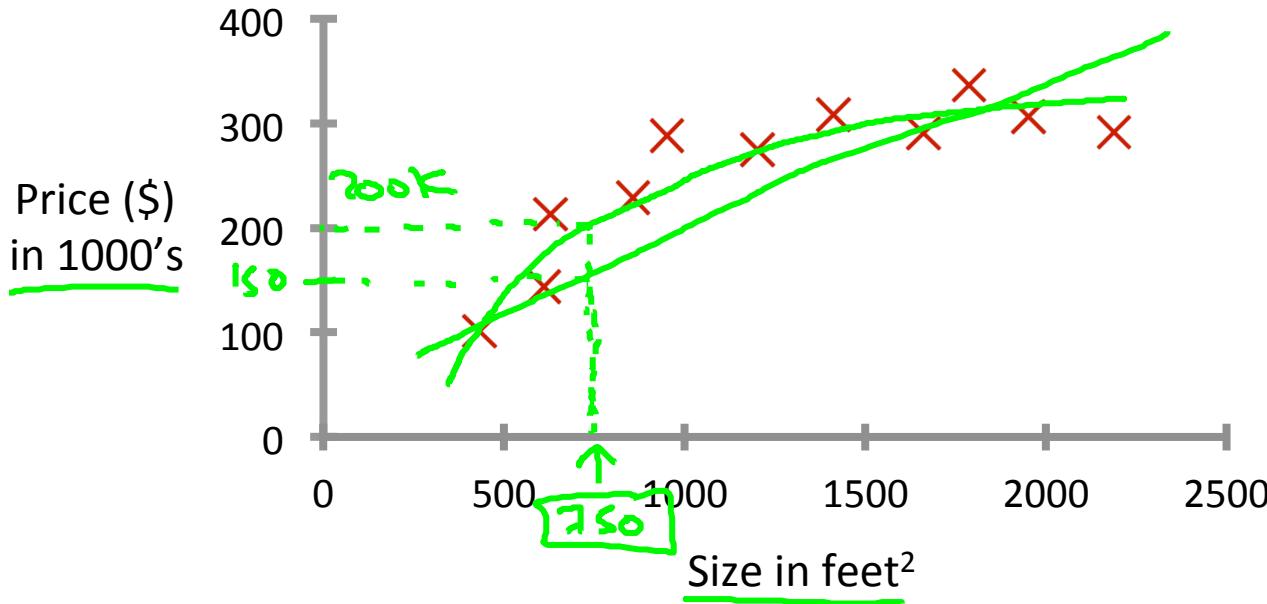

Machine Learning

Introduction

Supervised Learning

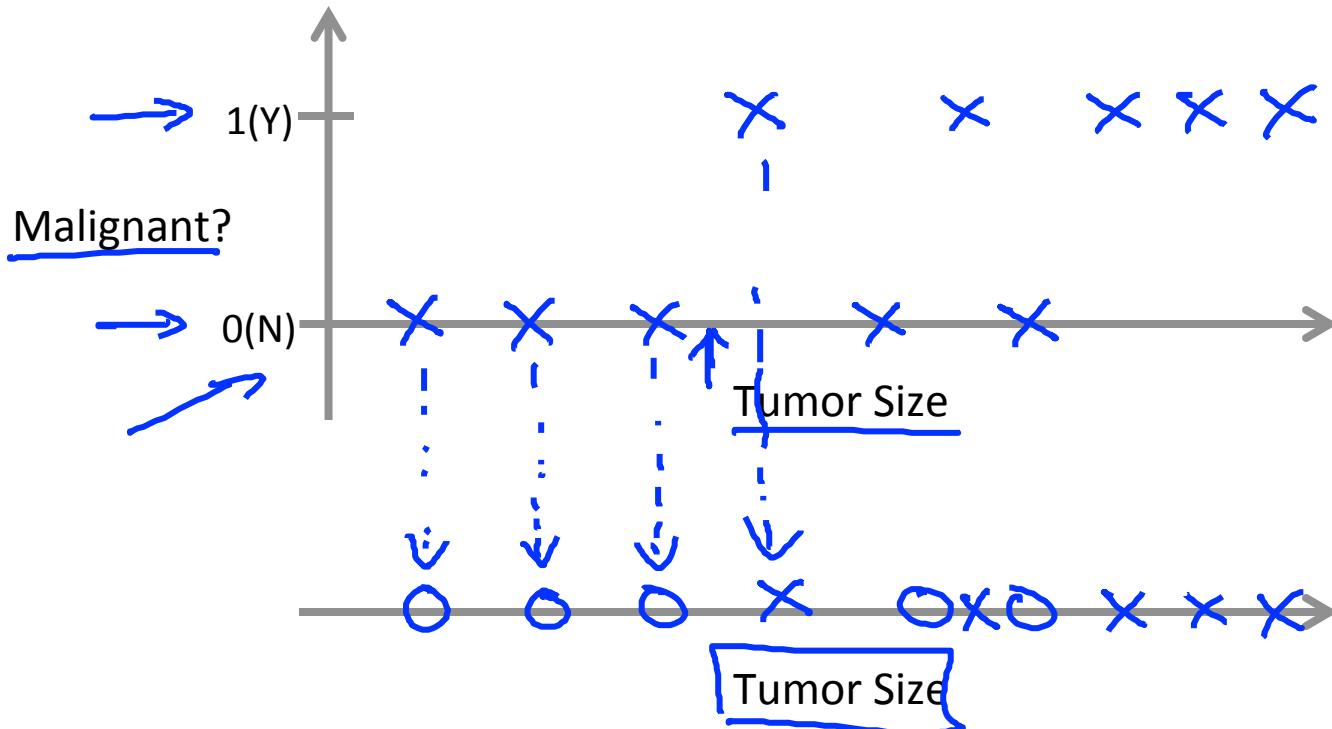

Housing price prediction.

Supervised Learning
'right answers' given

Regression: Predict continuous valued output (price)

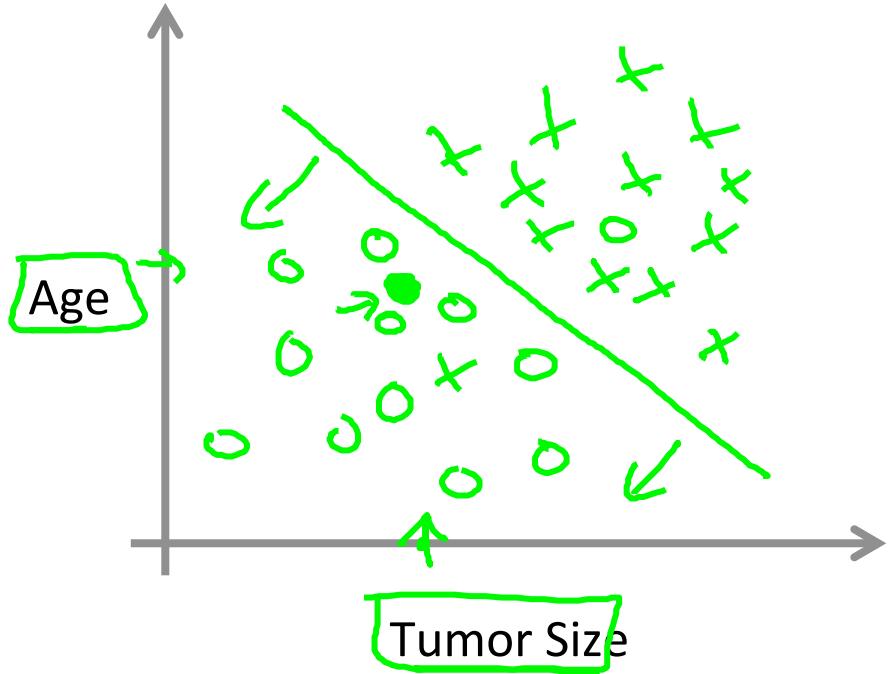

Breast cancer (malignant, benign)

Classification

Discrete valued output (0 or 1)

- Clump Thickness
- Uniformity of Cell Size
- Uniformity of Cell Shape

You're running a company, and you want to develop learning algorithms to address each of two problems.

1000's

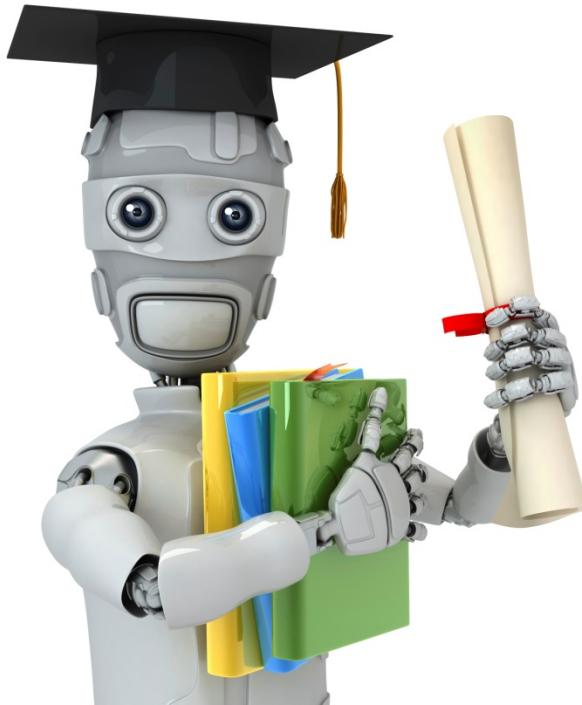

→ Problem 1: You have a large inventory of identical items. You want to predict how many of these items will sell over the next 3 months.

→ Problem 2: You'd like software to examine individual customer accounts, and for each account decide if it has been hacked/compromised.

→ 0 - not hacked
→ 1 - hacked

Should you treat these as classification or as regression problems?

- Treat both as classification problems.
- Treat problem 1 as a classification problem, problem 2 as a regression problem.
- Treat problem 1 as a regression problem, problem 2 as a classification problem.
- Treat both as regression problems.

BP Kills Macondo, But Its Legacy Lives On

Article Comments (2)

Email Print Permalink Like 2 More Text

By James Herron

BP confirmed late Sunday that the Macondo well that leaked almost five million barrels of oil into the Gulf of Mexico has been permanently sealed, but the well will continue to affect BP and the wider oil industry for many years.

The most immediate worry for BP and its shareholders is how the authorities will apportion blame for the spill. BP's own investigation spread responsibility across

Associated Press

Fire boat response crews battled the blazing remnants of the off shore oil rig Deepwater Horizon on April 21, 2010.

BP oil spill cost hits nearly \$10bn

BP has set up a \$20bn compensation fund after the Deepwater Horizon disaster, which has so far paid out 19,000 claims totalling more than \$240m

Julia Köllewe guardian.co.uk, Monday 20 September 2010 08.33 BST Article history

BP's costs for the Deepwater Horizon disaster have hit \$10bn. Photograph: Ho/Reuters

Cocktail party problem algorithm

```
[W,s,v] = svd((repmat(sum(x.*x,1),size(x,1),1).*x)*x');
```

Of the following examples, which would you address using an unsupervised learning algorithm? (Check all that apply.)

- Given email labeled as spam/not spam, learn a spam filter.
- Given a set of news articles found on the web, group them into
set of articles about the same story.
- Given a database of customer data, automatically discover market
segments and group customers into different market segments.
- Given a dataset of patients diagnosed as either having diabetes or
not, learn to classify new patients as having diabetes or not.
